P426	Paeonia mlokosewitschii	Sun	\$ 20
	Grown from garden collected seed from yellow blooming p. mlok. plants. From original Halda collection from open hills at 2000m in Abchazia. Flower colour may vary due to crossing - doesn't matter if you get white, yellow or pink - either way you've won the lottery with this plant.		
P376	Paeonia ostii	Sun Part-sun	\$ 20

	Growing only on Honshu, Japan, this collection is found in sparse, open woodland at 2000m on Hotaka Dake; palmate leaves are held on red stems; rich yellow flowers are borne in panicles up to 10cm wide. An excellent plant for a woodland garden or a more open site.		
P010	Pelargonium endlicherianum	Sun Part-sun Trough	\$ 10
	Our garden specimens are now over 10 years old and have grown well. They are planted in spaces between large rocks so that the stems and flowers just emerge above the rocks (this was Halda's suggestion). The umbels of large, electric pink flowers will fell any garden writer; best of all they open in July and continue for 3-4 weeks; from Turkish mountains. Cover the thickened rhizome the first year with bits of gravel.		
P014	Penstemon aridus	Part-sun Trough	\$ 9

	A mat forming western phlox with somewhat larger leaves and stems; this selection has dark purple flowers in profusion.

	Yellow flowers are circularly splayed around its small silvery rosettes. Alplains collection; Gunnison Co., CO, 2607m.		
P180	Phyteuma comosum	Part-sun Trough	\$ 15
	Glory of the eastern Alps; p. comosum is a classic alpine in every way, as Farrer said, "amethystine heads of wild pale bottles... deepening to darker tones of translucent purple at their tip... from which the curly stigma goes frisking forth in manner weird and wild. It is indeed the strangest of all the children on the cliff." Obviously for trough or choice crevice; maintain even moisture, provide some feeding and bait for slugs. Tufa helps immeasurably.

	A tiny willow restricted to the coastal barrenlands of the NW peninsula of Newfoundland. Alvar formations are uncommon - the burren of Ireland and the alvars of Manitoulin Is. In Ontario are other areas that come to mind. The limestone crevices and the thin soils that conceal the immense fields of fissured limestone are poor for farming, but a great place for specialized plants to grow and evolve; and, salix jejeuna is just such an example. Twiggy flat mats sprawl over the surface and will do the same in rather ordinary garden conditions. It will need only some water to carry it through the dry periods. Small rounded leaves on short petioles cloth the stems. Mats can extend to 30 cm in a couple of years.
